

Dear Hiring Manager,

AstraZeneca's focus on turning enterprise-scale data into decisions that accelerate cancer care is exactly the kind of product challenge I have been building toward.

I am an Azure and PSPO certified Data Product Manager with 9 years of experience owning enterprise data products end to end, from strategy and roadmap through governance, ingestion, and analytics enablement. At GEP Worldwide, I own the product vision for enterprise data products and a multi-tenant analytics platform that contributes \$3.7M in annual revenue. I launched GEP's Data Access Control framework with role-based governance, drove \$1.2M in incremental revenue, and reduced customer onboarding time by 35%. I defined requirements for real-time and batch data ingestion using Kafka and Azure Data Factory, enabling sub-5-minute data availability across business teams. I also shipped an AI-powered analytics chatbot using prompt engineering that expanded the active user base by 15% and increased self-service adoption by 25%.

The accountabilities in this role map closely to work I do daily. I translate commercial priorities into unambiguous data requirements, manage cross-functional backlogs across product, engineering, and analytics teams, and own governance and quality standards that keep data trusted and discoverable. I have hands-on experience with Azure Databricks, data lakes, metadata management, and data catalog tooling, and I hold certifications in Azure Data Fundamentals, PSPO, and AI/RAG for product leaders. My master's degree in IT and Management with a specialization in Data Analytics from Illinois Institute of Technology, combined with a published data analysis paper, reflects the analytical depth I bring to the role.

What draws me most to AstraZeneca is the direct line between the data products this role owns and the outcomes that matter for patients. I am ready to bring that same product-minded, value-driven approach to your Oncology portfolio and would welcome the opportunity to discuss how I can contribute.

Thank you for your consideration.

Sincerely,
Megha Kaul
